PROFESSIONAL SUMMARY

Detail-oriented Junior Web Developer with experience building modern websites and full-stack applications for foreign clients. Skilled in WordPress custom development, Angular, React Native, and PHP, with a practical approach to integrating APIs and automating workflows. Proven ability to build responsive platforms from scratch, optimize performance, and deliver projects ahead of schedule. Holds a B.S. in Information Technology (Web Development) with academic honors.

PROFESSIONAL EXPERIENCE

Brainbox | Angeles City, PH

February 2026 – August 2026

Junior Web Developer

- Acted as the sole in-house web developer, independently maintaining and updating WordPress websites for foreign clients, with a focus on custom block themes and Elementor Pro builds.
- Managed website hosting, SSL certificates, and deployment pipelines using SiteGround.
- Tested website performance, fixed technical issues, and improved overall user experience across desktop and mobile.

Key Projects at Brainbox

- **Razor Payments (Web Platform Development):** Built a complete website on a staging environment using Elementor Pro and Blocksy theme, then deployed to live production. Configured DNS domain records (go., books., links., mail.) mapped to GoHighLevel servers, set up dedicated email sending records, and integrated webhooks. Delivered the project with exceptional speed and quality, outperforming standard timelines of mid-to-large organization marketing teams.
- **Superior Business Networks (Theme Migration):** Designed and built a custom WordPress Full Site Editing (FSE) block theme in VS Code. Successfully migrated an existing Divi website to a modern block architecture with zero downtime. Integrated Advanced Custom Fields (ACF) and Event Calendar plugins.
- **Weld East (Performance Optimization):** Improved website performance to a 90+ score on Google PageSpeed Insights by preloading hero images and delaying non-critical scripts using Flying Scripts and Speed Optimizer.
- **Brainbox Corporate Sites (UI/UX Updates):** Restructured existing pages across company websites, replacing legacy card layouts and improved responsiveness for better mobile user experience.

IT Squarehub Global Services, Inc. | Angeles City, PH

June 2024 – September 2024

Full Stack Developer Intern

- Developed an Applicant Tracking System (ATS) using Angular, .NET Core, and PostgreSQL to make recruitment faster and easier.
- Designed responsive web pages and optimized database layouts to store applicant data efficiently.
- Built secure REST APIs with role-based access control to protect private HR data.

PROJECTS

ClarkNav: Real-Time Navigation Application

Dec 2024 – Mar 2025

Full Stack Developer | Capstone Project | Holy Angel University

- Built a responsive web application for routing Jeepneys and the Clark Loop (BRT) in Clark, Philippines, using Angular, Laravel, and PostgreSQL.
- Connected Google Maps API, geolocation, and WebSockets to provide real-time location tracking, live route guidance, and travel time estimates.
- Created user and admin panels with secure role-based access control (RBAC) to manage route data, trip planning, and fare details.
- Hosted the backend on AWS (EC2/RDS) and deployed the frontend on Hostinger for reliable everyday access.

Sign-um: Digital Document Signing & Workflow System

Sep 2025 – Feb 2026

Freelance | Full Stack Developer | Systems Plus College Foundation

- Built a PHP/MySQL platform to route, sign, approve, and track digital documents across multiple user roles.
- Created RESTful PHP APIs for real-time status updates and integrated CloudConvert to automatically convert DOCX files to PDF.

- Built a real-time notification system using AJAX polling, cross-tab syncing, and SMTP email delivery via PHPMailer.
- Implemented security features including password validation, signature capture, and Google 2FA (QR code) to prevent unauthorized approvals.
- Designed an "orphan-catcher" logic to automatically reassign pending tasks to active users when the originally assigned user is unavailable.

ElectricBillCalculator: Utility Cost & Submeter Manager

Mar 2026

Mobile App Developer | Personal Project

- Built a React Native/Expo mobile app to calculate shared utility costs using individual submeter readings.
- Implemented core logic and user flows to track meters, calculate monthly bills, and estimate power usage per tenant.
- Integrated Supabase for cloud storage, history tracking, and image-based data management.
- Added offline caching, reminder alerts, and a clean mobile UI for a faster and more accessible user experience.

EDUCATION

Holy Angel University | Angeles City, Pampanga

2021 – 2025

Bachelor of Science in Information Technology (Major in Web Development)

- **Honors:** President's Lister, Dean's Lister
- **Academic Presenter:** SOC Research Colloquium 2025
